

Cybersecurity Built for the Future

Modernize Your Cybersecurity Defenses

For more than 25 years, Axis Technologies has served as a trusted IT & Cybersecurity advisor for some of the world’s largest enterprises. **Our track record of expertise, accountability, on-time delivery, ROI and value has consistently earned us repeat business year after year.**

By partnering with our clients, we have built a reputation for delivering custom, cost-effective, on-time deliverables while properly vetting best-in-class Digital Transformation, Cybersecurity and Staff Augmentation solutions using agile software methodologies and a Tiger Team approach.

Axis, along with our cybersecurity division, Cyber-on-Call®, serves clients in the aerospace, defense, government, manufacturing, oil & gas, finance, healthcare, automotive and food & grocery industries. We are a growing, privately held, minority-owned company based in Plano, Texas.

Pentest Your Network

Our proprietary pentesting methodology identifies existing endpoint and network vulnerabilities for your company to remediate before cyber attackers can exploit them.

Protect Your Data

Our AI-driven cybersecurity solutions are the most effective and affordable way to protect your company’s most precious business resources, network & data 24/7/365.

Staff Your Projects

Easily access hard-to-find talent with DCSA clearances to support mission-critical projects. Our specialized recruitment services uncover qualified candidates in record time.

Over 25 Years of Proven Performance

Cybersecurity Modernization Services

Our cybersecurity services help enterprises protect sensitive data by providing industry-proven, best-in-class, Gartner-rated solutions to continuously identify security gaps, remediate threats and reduce risk to keep your business safe from phishing, ransomware and other cyber attacks.

Pentesting

Regularly test your network, endpoints and applications to identify security gaps before hackers can exploit them.

Purple Teaming

Simulate cyberattack scenarios to test the effectiveness of your red and blue teams in this collaborative, all-hands exercise.

E-mail Security

Detect, contain and prevent phishing, malware and ransomware attacks on employee e-mail accounts.

Endpoint Security

Protect laptops, desktops, mobile and IoT devices from malicious attacks that could compromise endpoint security.

Cloud Security

Secure hybrid and multi-cloud environments from a single console across AWS, Azure, Google Cloud, etc.

Application Security

Monitor and protect applications at runtime across web, app and database layers by identifying threats in real time.

Zero-Trust Network Security

Contain security breaches by segmenting network access, authenticating user identities and enforcing security policies.

Managed Detection & Response (MDR)

Outsource your cybersecurity to our 24/7/365 SOC-as-a-service with proactive threat monitoring, detection & response.

Remediation & Forensics

Restore IT systems and network operations, investigate security breaches & conduct threat actor forensic research.
